

## Week 4 Sprint Report

### Overview

During the fourth week, we focus on finish the objectives of the previous week. Trying it.

### Accomplishments

Joel:

Successfully implemented functionalities:

Data Base polish

Jan:

Front-End polish .

Muhannad/Shadi:

Finishing the Back-End.

Johannes:

Coordinating the team and organizing all the members.

### Challenges Faced

Time and inner dependency between task. F. ex. Jan couldn't start working until Joel and Johannes finished working. He was most of the time waiting instead of programming.

### Goals for Next Week

Finish Sprint2, specifically the parts that it doesn't work right now and try to improve what we've done. And having a better plan for the Sprint3. In order to arrive on time for the goals.

### Conclusion

During Week 4, the time was the biggest problem. We've committed most of the things in two days instead of using the three weeks we've had. As a result, there some part which works and other which don't. With a little bit more of time. One or two days or more, we could have done it perfectly.

### Sprint Metrics

Total tasks completed:2

Total hours spent: ~80 hours.
